Sierra Tarascans
[p. 64a]

426 In addition to the above-described types of loans, there are also loans at interest for which normally no security is offered. These loans are usually made by persons within the village and rarely exceed $100 in amount. Interest is normally 10 percent per annum. In some cases it is stipulated that the debt is to be canceled upon the death of the debtor. In other instances the debt becomes a charge against
● [428] the estate of the debtor. If the possessions of the debtor at death are insufficient to pay the debt, it is not transmitted to his sons. However, according to Pedro Chávez, the sons probably would make every effort to pay such a debt because of the strongly held belief that a person
[775] dying with debts cannot rest in peace until the debts are paid.

All transactions involving loans are in writing, although they are not registered at the *municipio*.

COSTS OF PRODUCTION AND INCOME

433 Some further insight into production prob-
434 lems may be gained by detailed studies of
128 specific activities. These data throw light upon the relative profitability of such activities and also provide information on income. Not all activities are covered in the ensuing discussion, nor are the data equally reliable in each category. Such activities as witchcraft or midwifery are not included; the labor factor in beekeeping or fruit growing is impossible to ascertain. An activity followed by only a few individuals merits less attention than one followed by many.

Not only is the treatment of topics uneven, but the income data are subject to misinterpretation. It must be emphasized that virtually no one in Cherán, except a few "rich" farmers or storekeepers, has only one occupation. Consequently, any effort to establish annual income on the basis of figures in this section would be grossly misleading. Finally, it should be noted that not all the activities discussed below are productive. Because of the problem of income, I have considered a number of "service" occupations in this section.

AGRICULTURE

243 *Maize.*—Data on farm production were diffi-
433 cult to obtain. On no other subject is there so
124

556 the rich. Repeated efforts to pin him down resulted in the identification of not a single individual as a *rico* and the assertion that anyone who harvested 50 to 100 *cargas* of maize is a rich man. As this means a cash income from this source of around $300 to $600 or $700 a year, the standard is not high, although probably wheat, cattle, and other sources add to such income. It is worth observing that almost no storekeepers are classed as wealthy—they usually do not have much land.

428 The inheritance of property in Cherán is normally from parent to children. Should an individual die without formal disposition of his property, the municipal officials would endeavor (subject to whatever influences might be brought to bear on them) to divide the property equally among children without regard to sex. Normally, however, the heirs would make the division, and it would merely be submitted to the *municipio* for approval. In this way inequalities often creep in through domination of one heir by another and the desire to avoid a fight.

It is quite common in Cherán for the property to be disposed of by the owner before death by making a will or, more commonly, by making a statement of intention to a reliable and trusted friend before witnesses. Such decisions will be respected and enforced by the *municipio*.

Property owned by women will ordinarily go to their children. However, should a couple be childless, the spouse does not inherit. There are numerous cases in Cherán of well-to-do couples where the bulk of the property is owned by the wife. Although the husband uses and administers the property, he has no rights in it unless it is formally made over to him by his wife during her life time. Similarly, a widow does not inherit except in special cases. This, again, involves a will or making over of the property during the life of the owner. Usually such an act is taken by a man only when his sons are rebellious and unfilial.

There are frequent cases where men do not leave property equally to all children or where they leave it to some other relative. In rare cases, there may have been some assignment of property to children before death. Then the child, usually the youngest, who has cared for the parent in old age, receives all the remaining

428 property, a form of ultimogeniture. Such cases are understood and usually cause no friction. Other instances sometimes give rise to bitter feelings. Cases were recorded where children had broken away from parental authority and had become established through their own efforts. Sometimes the elderly persons were cared for by a niece or nephew, or even by some person not related at all, who received all the property. Resentment is generally felt by the children, even though they may have well deserved such treatment.

If properties are small, the daughters are sometimes slighted. If a lot, for example, is too small to divide and there are a son and daughter, the son will get the lot. On the other hand, if the lot is large, it will be divided between them. Often, however, the brother will take advantage of his sister, who, to avoid a quarrel, will accept an unfair division but will lose no chance of getting even. An example that came to attention was a division of a lot in which the brother took the part containing most of the fruit trees. When the brother went on a 3-day [593] trip during pear season, his sister and her husband cut all the pears and sold them. The brother hesitated to do anything about it because it would have brought out the unfairness of the original transaction.

Frequently, the division of personal and movable property is unfair. Children who are away from home are apt to get nothing. However, their land rights are usually more or less respected. Even so, on their return, they may appeal to the *municipio*, which will force the other heirs to make a proper settlement.

428 Various adjustments are made to meet special situations. Often an expert in property values 423 is called in to make the division. For example, a man with two children may have left a lot and a piece of farm land too small to divide. The expert decides the value of each and the one receiving the least valuable parcel is recompensed through sale of personal property. Where a lot cannot be divided, a piece of land may be sold from the estate to buy a lot for one of the children.

428 Conflicts also arise from transactions entered into by the owner before death without informing the heirs. For example, Agustín Rangel's father bought a house from his own father.

425 The grandfather died while the Rangels were
428 living in the United States, and a brother moved the house onto his land. The Rangels returned some 27 years later and claimed the house, producing papers to show that it had been purchased. This was the first the brother had known of the transaction, and he was not only angry but refused to surrender the house until forced to do so by the *municipio*. This did not smooth family relations.

428 Other instances illustrate and bear out the
578 assertion that most of the conflicts in Cherán are over inheritance. For example, a woman
675 on her death bed divided her property as follows: A lot and certain lands to each son, three lands divided among her three daughters (one married, two small), and a house (*"troje"*) to be sold to pay the marriage expenses of the unmarried daughters. A few years later a brother tried to sell the house, and the girls appealed to the witnesses. The witness spoke to an uncle, who forced the brother to give up the idea.

428 Even in those few cases in Cherán in which
593 sons remain in the family group and which function as joint families, the group dissolves
768 immediately on the death of the father. Informants were unanimous and positive on this point, despite the fact that before the father's death the elder brother usually will have been handling the communal treasury and acting as head of the family.

428 All inheritances are supposed to be registered
217 at the *municipio*. This is certainly done where an outsider is called in to make the division.
425 Then each heir is required to sign (or someone signs for the heir before witnesses) a statement that he accepts the division. Evidently most property transactions of any sort are so registered. It should be noted that registration of a property transaction in the *municipio* is quite apart from registering lands with the tax collector and there is no connection between the two offices. Land not registered for taxes may be sold and the sale recorded by the *municipio*.

181 Even though many details of the economic
556 system of Cherán are still not known in detail, some observations seem possible. The Cherán economic system has important relations within a general Tarascan economic system and also

773 still alive in town, and one particular man
775 who had been drowned in the lake was there wrapped in a blanket and dead drunk.

In the experiences of revived people, we also find the theme of coming back to the world in order to correct or help correct bad behavior:

[539] "A woman was dead for three hours. She was ordered to come back to this world in order to go to her son who had abandoned his wife and was living with another woman. She was ordered to tell her son that he should take his wife again and only then would he be forgiven and would he be able to reach purgatory. When the woman saw them living together again, she then died."

In another case the dead person has to come back to life in order to have the mass said which he had promised to Saint Francis.

Besides coming back to life, the dead appear to living persons in dreams or otherwise in order to ask them to correct their bad behavior. In one case a dead man appears to his friend and says:

[539] "Doroteo, Doroteo, don't be afraid. It's me, your friend Refugio. Come with me where I have my money. Hidden as it is, nobody profits from it and God does not want to forgive me because of that money which I have like that and nobody finds it. Come so that you can tell my wife and then you can take as much as you want."

The man (Doroteo) had almost decided to go but suddenly he was scared and ran away.

In another case, a married couple had
● [428] adopted a boy. The man had promised to give him the kitchen as inheritance, but when the man died the woman did not give the kitchen to the boy:

[539] "She dreamed of her husband; she dreamed he was in hell and was taken to be burned. He told her it was her fault, that because she didn't give the kitchen to the boy they were taking him to be burned and that she should give it to him. Then an angel came and arranged the whole thing so he didn't go to the burning because he had repented. 'That's what I dreamed,' the woman says, 'and I think it's true.'"

A similar case is that of the dead bandit who had buried his money. His ghost keeps calling people to take the money and have some mass said for him.

423 hectares in size,[45] and may be used indefinitely by the recipient, provided they are not left untilled for more than two successive years. They may [428] be inherited by sons, daughters, or in-laws, and may be divided among them. A family head may sell the use rights of his land to another member of the community, but not to outsiders. The official title to lands is held by the pueblo.

Another remnant of communal holdings, common in all parts of Tarasca, is found in the woodland, which is considered common land.[46]

[804] [Text continues top of P. 33b]

[45] In most parts of Tarasca land is measured in terms of the quantity of grain used in planting. Thus, in La Cañada a plot of maize land may vary from 1 to 8 liters of maize in size. Approximately 2 liters of maize is necessary to plant 1 hectare. (The term "hectare," however, is unknown to most Tarascans.) Five liters of maize equal 1 *medida;* 100 liters of maize are equivalent to 1 *fanega* (one hundredweight), or one *yunta*, meaning the amount of land in which a team (*yunta*) of oxen can plant one *fanega* of maize in one season. In terms of wheat, 44 liters equal 1 *carga*, or from 1 to 1½ *yuntas*. The above equivalents are those used in Chilchota and Carapan. Similar land measurements are employed in the Sierra.

[46] This aboriginal custom parallels the ancient Spanish practice of reserving woodland as communal property.

TARASCAN ECONOMY

241 Tarascan economy is today, and was in pre-Conquest times, as diversified as that of any large Indian group in North America. Agriculture has always been the preeminent occupation of most of the Tarascan population. Formerly, a 226 significant part of the people were fishers (or farmers and fishers), living around the shores of Lakes Pátzcuaro and Zirahuén and the numerous lakes and marshes of the northern plateau; the modern fishers are limited chiefly to the islands 224 within Lake Pátzcuaro. Moreover, hunting and 222 gathering, although now of small importance, is still practiced throughout the area. Apart from 463 the food quest, two other occupations have characterized Tarascan economy since prehistoric days: handicrafts and trade. Many of the Tarascan [438] villages specialize in particular home industries, for which they are famed over a large area. Again, in prehistoric and modern times the Tarascan has been one of the more notable Indian traders, serving as commercial middleman between the *tierra fría* and *tierra caliente* to the south and west.

AGRICULTURAL SYSTEMS AND ASSOCIATED CROP TYPES

241 Tarascan agriculture involves a mixture of New and Old World plants and cultivation practices. 177 The native trilogy—maize, beans, and squash—
